Courses

Data Science, GreyAtom

01/2021

Automated BOT Using Python

- Utilized Python libraries (Selenium, webdriver-manager, reportlab, BeautifulSoup) to develop an automated bot.
- Consolidated client data and facilitated uploads to government portals.
- Extracted data from government portals, including Plastic Waste Management, Battery Waste Management, and E-Waste Management.

Plastic Footprint Dashboard | Client: P&G India

- Analyzed raw client data and implemented data cleaning activities in Power BI.
- Developed KPIs to assess product SKUs and recycling metrics per the client's business model.
- Created an interactive dashboard enabling state-wise insights and a summary deck for stakeholder presentations.

EPR Dashboard | Client: Mondelez

- Collaborated with clients to gather technical and business requirements.
- Conducted data cleaning and modeling in Power BI to calculate key KPIs.
- Delivered a dashboard enabling stakeholders to monitor agent performance and ensure compliance with targets.

Plastic Footprint Dashboard (Japan) | Client: P&G Japan

- Processed raw data using Python for backend logic and Flask for data upload functionality.
- Developed a Power BI dashboard summarizing results and generating downloadable reports.

MIS Report Automation | Client: Faces Canada

- Cleaned and merged data from over 20 sources, including sales data and client mapping sheets.
- Built Python-based bots to scrape e-commerce portal data and implemented backend logic.
- Created comprehensive dashboards with pivots, charts, and matrix views, incorporating row-level security.
